

Project description

The wings of the bridge have the shape of a dragonfly. The architect had this brilliant idea and asked us to weave a dragonfly wing structure that complements the oddly shaped railings, and by doing so give the bridge an even more dynamic feeling, that at almost any moment the bridge could spread its wings.

Product information

Product: Lalace

Application: Railing

Function: Bicycle Bridge

Type: Bended

Material / coating: Stainless Steel

Pattern: Dragonfly

Colour: White

Pattern ratio: 40/60

Mounting: Binding wire

Project size: 173 m2
