

Project description

A wind study at Kop van het Dok showed excessive wind at the nearby roundabout. To address this and shield the supermarket's loading area, Vlissingen installed a windscreen designed by Buro MA.AN. Inspired by the Schelde shipyard's history, the screen features a collage of archive images transformed into colorful "dedots" on a 4-meter fence. This striking screen reduces wind impact and enhances the Scheldekwartier entrance.

Product information

Product: Dedots

Application: Enclosure

Function: Windbarrier

Type: Bended

Material / coating: PVC coated chainlink, PC-ASA dots

Pattern: Historical imagery of dockworkers

Colour: 10

Dot Density: 100%

Mounting: Binding wire

Project size: 148 m2
