

Project description

This was a special project because it was in collaboration with Nike, who was the main sponsor of a brand-new soccer facility in Soweto, South Africa for the FIFA World Cup in 2010. In close collaboration with Nike and an African artist we developed a unique pattern for a huge screen. This was their landmark, separating the parking area from the soccer fields. If you look closely you will find a soccer ball woven into the pattern design.

Product information

Product: Lalace

Application: Enclosure

Function: Soccer campus

Type: Bended

Material / coating: Galvanised

Pattern: Nike Art & logo

Colour: Galvanised

Pattern ratio: 70/30

Mounting: Clips (type 1.1)

Project size: 210 m2
